IM Lock Scheduler

IM Lock Network

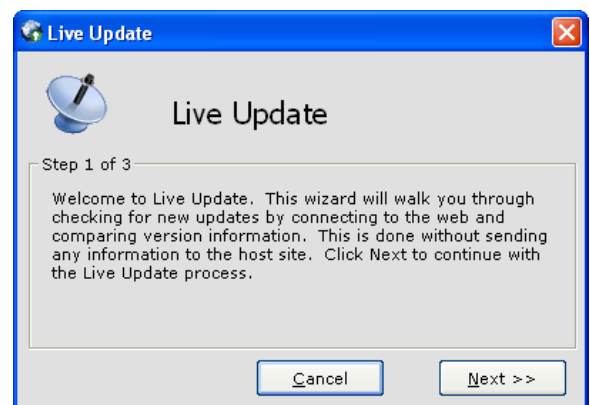

- IM Lock Networking is a way for a single Administrative Workstation to control all network installations of IM Lock.
- There is no limit to how many clients can be installed.
- You can create multiple shared folders, each with a different blocking setting.
- IM Lock Enterprise installations can be set as a Client or Administrator from any workstation.

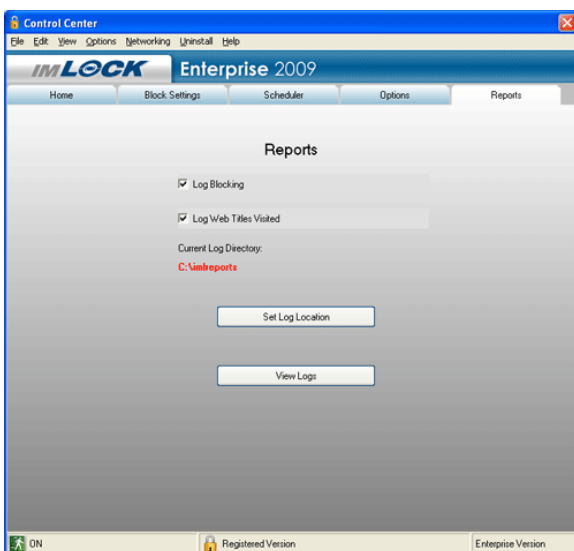

IM Lock Network Administration

IM Lock Live Update

- IM Lock Live Update allows you to get the latest blocking rules remotely from our server. If a new web messenger, or a new instant messenger is released, for example, we will post the blocking definitions on our website. You can then retrieve and install them with the press of a button from the IM Lock Control Panel.

IM Lock Live Update

IM Lock Reports

Web Use Reports

- IM Lock allows you to capture internet use reports in text file form. You can view your reports with a simple text editor like Notepad.
- Internet Surfing – You can capture the titles and URLs of the websites visited by the computer users.
- Blocking Reports – You can capture all the blocking done by IM Lock, including websites blocked and programs blocked.
